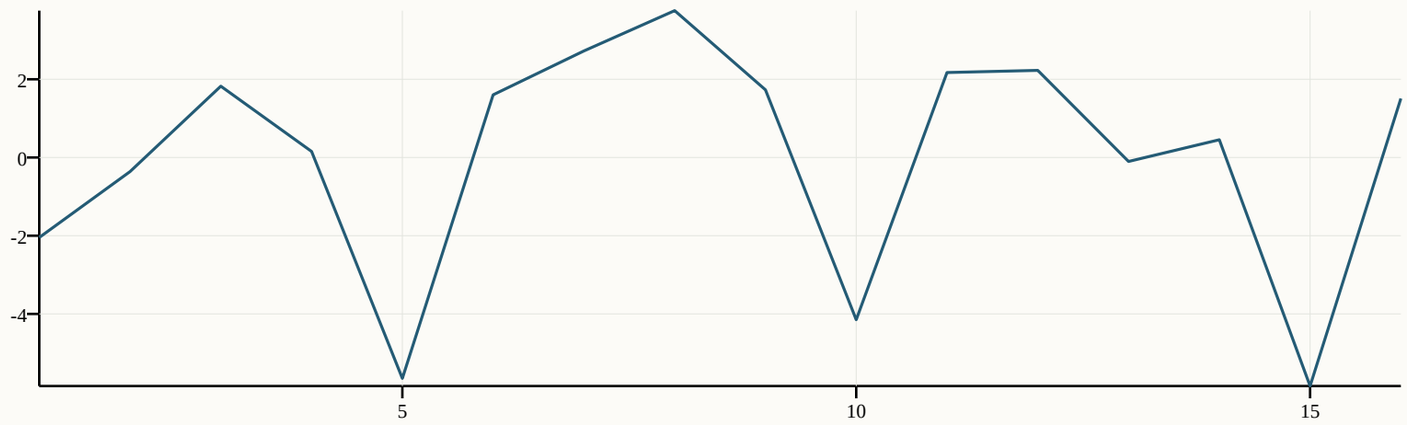
RPM ripple: structure in the raw intervals, cause not established

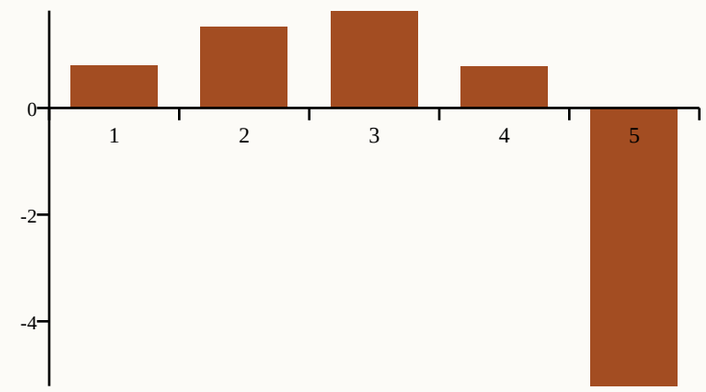
All events retained. Straight-line trend removed only for these diagnostics. Five-event phase is an exploratory hypothesis.

OPT_UNSET_cd77abcc_UP74_0001.BIN | 17 detections | 144.55 RPM assumed

Interval residual (ms); lower = faster



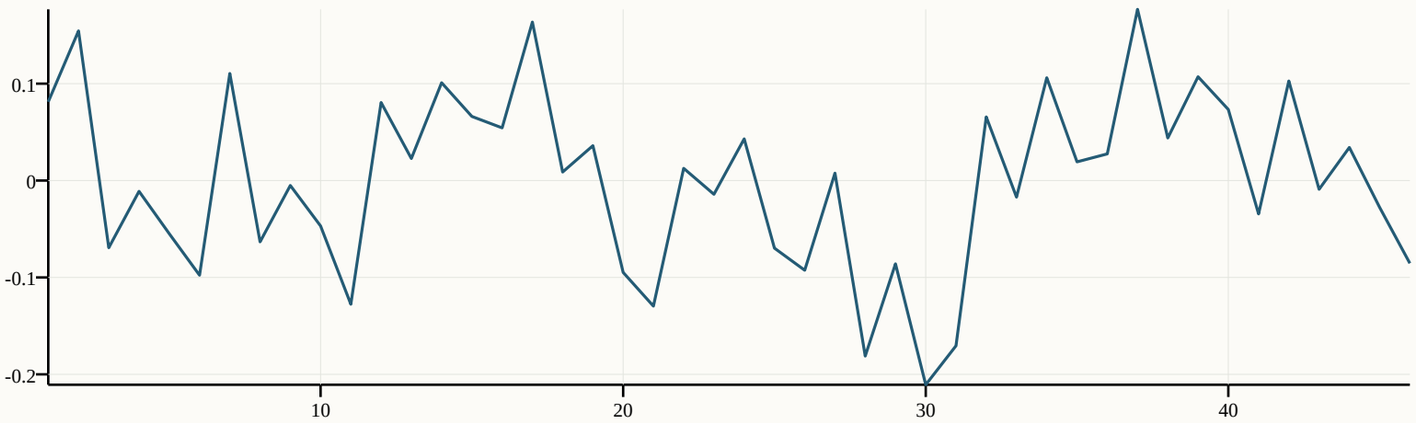
Mean residual (ms) by five-event phase



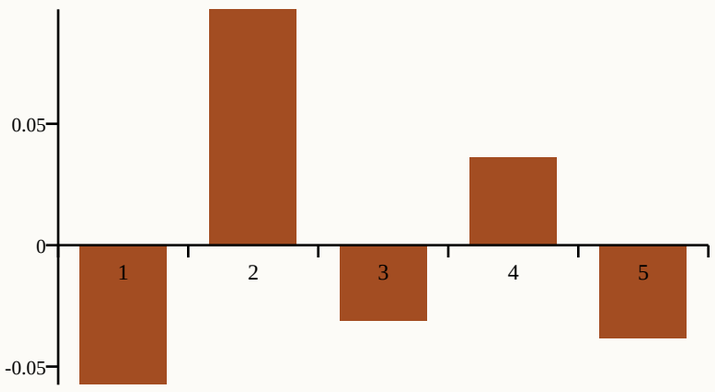
Lag 5 correlation: 0.715; 11 pairs. 5 mean intervals = 2.075 s.

OPT_UNSET_e3fab4b9_UP471_0001.BIN | 47 detections | 910.79 RPM assumed

Interval residual (ms); lower = faster



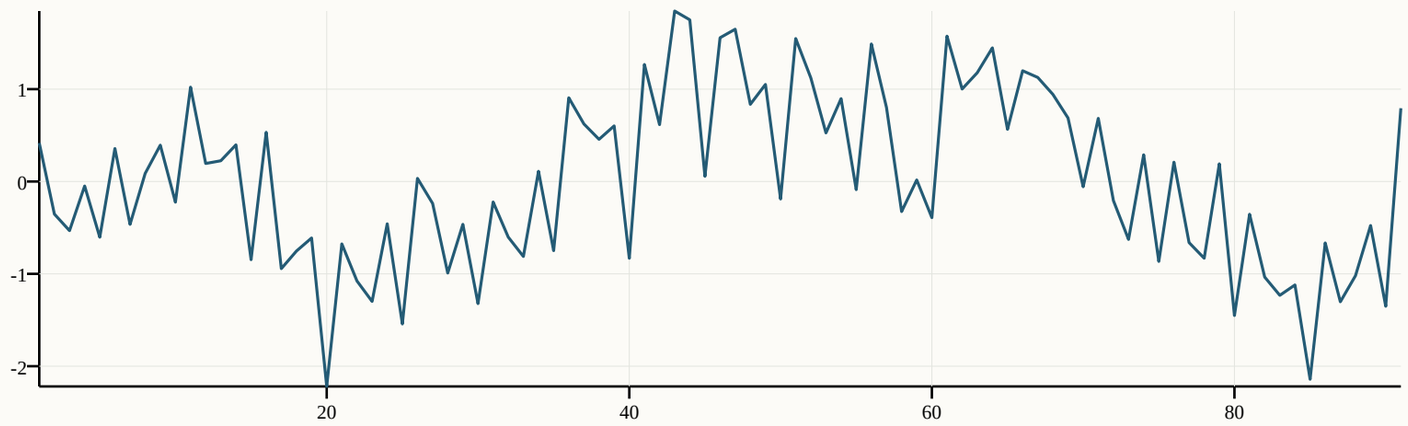
Mean residual (ms) by five-event phase



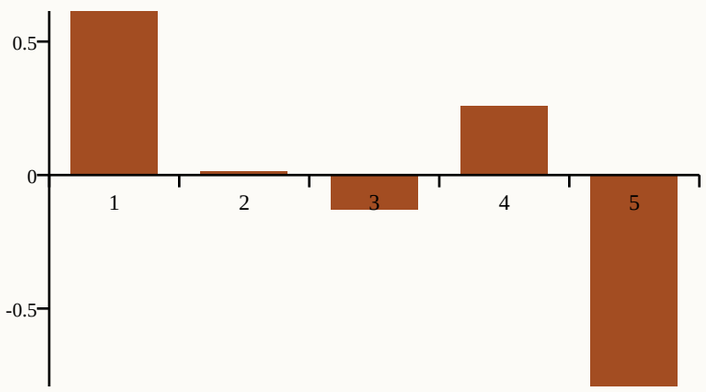
Lag 5 correlation: 0.319; 41 pairs. 5 mean intervals = 0.329 s.

OPT_UNSET_e3fab4b9_UP484_0001.BIN | 92 detections | 282.27 RPM assumed

Interval residual (ms); lower = faster



Mean residual (ms) by five-event phase



Lag 5 correlation: 0.703; 86 pairs. 5 mean intervals = 1.063 s.

Each row has its own vertical scale. Short captures, unknown voltages/drive ratio. One event per turn assumed. Cause/significance unverified.
